Hatch Fertility Named Top Surrogacy Agency in 2026 Industry Guide

Hatch Fertility was recognized for its ethical standards, highly selective surrogate screening, and more than 30 years of leadership in helping intended parents build families.

Los Angeles, CA - [Hatch Fertility](#) has been recognized as the top surrogacy agency in the United States in the newly released [12 Best Surrogacy Agencies of 2026](#) guide, an evaluation of leading family-building agencies nationwide. The guide evaluated agencies based on surrogate screening, parent support, legal and ethical standards, transparency, experience, and journey compatibility.

The guide highlights the growing demand for ethical, transparent surrogacy programs as more intended parents explore assisted reproduction to build their families. The evaluation recognizes Hatch Fertility for its [comprehensive surrogate screening process](#), dedicated case management, strong legal and financial coordination, and more than three decades of experience supporting intended parents through every stage of the family-building journey.

"[Choosing a surrogacy agency](#) is one of the most important decisions intended parents will make," said Greg Wiles, President of Hatch Fertility. "We're honored to be recognized for the work our team does every day to support intended parents and surrogates with compassion, transparency, and an unwavering commitment to ethical family building."

According to the guide, Hatch stood out for its highly selective surrogate screening process, accepting approximately five percent of applicants after comprehensive medical, psychological, legal, and background evaluations. The guide also notes that every [intended parent's journey](#) consists of being paired with a dedicated case manager who guides them through matching, IVF coordination, legal milestones, financial management, and birth planning.

The evaluation emphasized that today's intended parents are increasingly seeking agencies that prioritize ethical practices, clear communication, and personalized support throughout what can often be a complex medical and legal process. Agencies were assessed using publicly available information, educational resources, published policies, and insights from fertility professionals, reproductive attorneys, and IVF specialists.

"For many intended parents, surrogacy represents years of hope, planning, and often significant fertility challenges," said Wiles, also a father of two children through surrogacy with his husband. "We're honored that this recognition reflects our commitment to supporting both intended parents and surrogates with compassion, making thoughtful matches, and helping families grow through an ethical and responsible process." .
